INSTRUCTIONS:

Helpful Hints:

After cutting lace to the required length, cut one end to a long point for the working end. This will make it easier to lace through the holes.

When lacing, make sure that the lace does not twist. If lace should twist, run lace between the thumb and finger from the project down to the end.

Pull lace snug, using the same amount of tension on each stitch. When going around corners, lace twice in corner hole.

Whip Stitch: Requires approximately 3 inches of lacing for every inch of edge to be laced.

1. Line up your project, holding it with the front facing toward you. Start lacing at the least noticeable place (see Figure A).
2. At the starting hole, push lacing through from front to back leaving a 1" tail. Continue by bringing working end over and through the next hole (see Figure B).
3. Finish by pushing working-end through the starting hole. Then from in between the parts, pull both the tail and the working end out and run them under several stitches. Cut off extra lace (see Figure C).
