General Wood Instructions

Sanding

The rule of sanding is "Never across the grain".

- 1. Do not tear sandpaper. If you do, the ragged edges will often scratch the wood surface.
- 2. For flat surfaces, wrap a piece of sandpaper around a block of wood or use a store bought holder. Start with a coarse grade of paper and finish with a fine grade of paper (not included).
- 3. Be consistent. Do not sand one area with fine and another with coarse grade.

Staining

- 1. Be sure the wood surface is smooth and clean. Stains can accentuate any roughness or scratches of cross grain sanding. Wipe off any dirt or dust with a soft cloth.
- 2. A base coat of sealer/primer and a light sanding before applying stain will insure a uniform stain.
- 3. Apply stains in one direction following the wood grain. Use a soft brush or foam brush. Let the stain penetrate the wood, then wipe off excess stain with a soft cloth.
- 4. If stain looks too dark, dampen the cloth with water/thinner and wipe until you achieve the desired color. If stain is too light, let dry, then apply another coat of stain and wipe off.

Finishes

1. Outdoor projects may be finished with polyurethane or varnish.

These are toxic and must be used in a well ventilated area. Indoor projects may be finished with decoupage or left unfinished.

Protected Work Surface

Nail or Awl

Paint or Stain

Soft Cloth

Brushes

WARNING:

CHOKING HAZARD - Small parts. Not intended for children under 3 years.

SUFFOCATION HAZARD - To avoid danger of suffocation, keep plastic bags away from babies and children. Do not use bags in cribs, carriages, or playpens.

PROJECT TIME: 45 MIN

Product Instructions:

- Sand all wood parts until smooth. Wipe off excess dust with a soft cloth. It may be best to stain or paint wood pieces before assembling. A combination of stain and paint looks great. Let dry. Refer to the General Wood Finishing instructions on back for sanding and finishing tips.
- Follow the diagram shown on the opposite page for assembly of the bird feeder. Apply glue along both ends of both long slats. Arrange the long and short slats to form a box as shown. Press firmly together and let dry.
- Apply glue to the top edges of the box shape. Center one large flat base on top of the box and let dry. Flip this over to form the base of the birdfeeder.
- Apply glue to the bottom of the angle cut wood piece. Center along the back edge of the box and press into place. Let dry.
- Apply glue to the top of the angled wood piece. Center and firmly press roof piece into place.
- Using the point of a nail or awl, push a small "starter" hole into the roof piece directly above the angled piece.
- Screw the provided screw eye into the "starter" hole. This may take a lot of firm, even pressure.
- Hang birdfeeder from screw eye using string or wire.
