W10375 Candy Striped Hoop Holders

Use: These foam hoop holders have holes that are 0.65" in diameter and designed to work with our Spectrum Candy Striped Hoops and Spectrum Economy Hoops, whose hoops are made with tubing that has an outer diameter of 0.75". To use the hoop holders simple put hoop into any of the 5 slits in the foam and down into the hole at the end of the slit. You can use 2 or more hoop holders to create a variety of targets and obstacles. Some options are shown in the photos to the right and below.

Caution: When not being used the hoops should be removed from the holders. The EVA used to make these holders is durable and economical, but will over time tend to take whatever shape it is in (the technical term is call "compression set"). This means that if you

leave a hoop in the holder that over time the hole in the holders will become enlarged they won't hold the hoops in position as well. Due to the compression setting of the foam, we recommend against using with hoops that have been made with tubing that is larger than 0.80", including our No-Knott and Super Hoops. If you use these holders with the hoops with larger tubing sections, they will likely not work with the Candy Striped Hoops.
