

W7688 Color-Me Kites

Instructions:

The kites come mostly preassembled with the tales and the main spar attached to both the diamond and delta style kites. After connecting the spars, loosen the tales and attach the kite string to the front of the kites. You are now ready to decorate or fly your kites!

Diamond Kites - There are two short spars that will need to be attached. Insert the end with the protective cap into the slot in the outer corner of the fabric of the kite and then insert the other end into the plastic cross. Repeat with the other spar.

Delta Kites - Insert one end of the spar into the fabric slot on the side of the kite, then bend the spar and insert the other end of the spar into the slot on the opposite side of the kite.
