

DUTCH SHUFFLEBOARD

Reorder # W2142

Made in China

Equipment Needed: Shuffleboard Game Board, 16 Pucks, Powdered Wax.

Object of Game: To score the most points by sliding the pucks into the goals at the other end.

Version I: 6 pucks. Each person slides pucks to the scoring end one at a time. Total score using the numbers on the arches in front of each compartment. The pucks must be inside the compartment far enough to see behind them. Players take turns sliding all 16 pucks at one turn. Any number of players 2-8.

Version II: In this version, the number on the front of the arches is ignored. Each person slides all sixteen pucks. To score, you must have 1 puck in each of the compartments. One puck in each compartment gives you 10 points. For each additional puck you get one point. Also 2 in each compartment gives you 20 points, etc. (2-8 Players)

Version III: For two players – One player considers the left two compartments as his/her. The other player considers the right two compartments his/her. All pucks going into the left two compartments score for that player using the number on the front of the arches. Same rules apply for the right compartments. In this version, each player slides 8 pucks and they alternate turns. That is, the first player slides 1 puck and then the second player slides 1 puck until all 16 pucks are used.

Care of Your Game: This game is designed to have a very fast playing surface. Periodically you will notice that the pucks move slower. It is then time to clean your board. Clean all the old powdered wax off the board and then wipe the surface with a damp cloth. Apply a paste wax to the surface and polish until it shines. Add a light sprinkling of powdered wax. This should provide very fast actions on the board again. New powdered wax should be added occasionally between paste waxings.
