

## W11585 Spectrum Mini Hockey Goals

### Assembly Instructions for Goals

#### Goals: (Each goal requires – image 1)

- 2 – Long tubes (~24" L)
- 2 – Medium tubes (~18" L)
- 2 – Short tubes (~14" L)
- 6 – "L" Shaped connectors
- 1 – Sleeved Net

To make it easier to slide the tubes into the connectors, wipe the outside edges of the tubes with some liquid hand soap or dishwashing detergent.

#### Assembly Instructions:

1. Insert a tube that is a little longer than each sleeved pocket around the perimeter of the net as shown in image 2.
2. Connect the long tube without the Spectrum logo to the short tubes adjacent to it using 2 "L" shaped connectors. Add an "L" shaped connector to the opposite ends of the short tubes and align them such that their open ends are positioned up. See image 3.
3. Insert the medium tubes into the connectors facing upward and attached an "L" shaped connector to either end of the other long tube as shown in image 4.
4. Position the long tube with the connectors attached over the corresponding medium tubes, rotate the connectors so that the open ends are over the medium tubes and push down to complete the assemble as shown in image 5. The assembled goal is about 21" H x 27.5" W x 17" D.

For play without goalies, the nets can be flipped to create an even smaller target.
