

WAX ART CANDLE KIT

These "Wax Art Crystal" candle kits are at the top of the list as the easiest candle to make. Wax art crystals, are also called granulated wax in the professional candle making world. This is a wax that has been formed into tiny beads slightly larger than sand. The Wax Art Crystals are available in a variety of different colors. What makes this so easy to work with is that the wax does not have to be melted other than the top of candle to seal the container. The idea behind wax art is that it's very similar to "Sand Art" and is easily poured into any "candle safe" container that turns into a candle you can burn when you are finished. This kit contains all the materials you will need to make 24 wax art candles in 4 jelly jars.

You will certainly enjoy experimenting with different color combinations, angles and patterns in your wax art container candle. But first the wick needs to be placed in the glass container in the center, and then pour your first color into the bottom so that it covers the bottom of the wick and holds it in place. The rest is now up to you to create your own unique Wax Art Candle.

You can select several colors and gently pour the wax into the container with a spoon or other dispensing tool. You can take multiple colors and layer them in the glass to the desired height. For ultimate effects such as waves, you can use a long, narrow pointer such as a knitting needle or chopstick and slide down the side of the glass container into the wax layer to make valleys that a new color of wax can be layered into. This will create "waves" in the wax when you then fill in these channels with your next color. After you have filled you're your container to the desired height you will need to seal the container. The easiest way to do this is take a small amount of the granulated wax and melt in a double boiler. You should not heat this wax about 140F. Then pour a small layer on top of the granulated wax this will seal the wax in the container.

WARNING: This is a candle that when lit should follow all safety instructions of a standard candle. Never burn more than 2 hours, keep away from pets and little children, burn on heat safe surface and NEVER burn a candle unattended.
