

What is a Geode?

Geodes are formed from fluids which crystallize within a rounded rock or nodule. Geodes are found in many parts of the world. The geodes contained in this package are from Morocco. Most of them have hollow centers lined with beautiful crystals. Break open yours today to look for the hidden crystals!

How to Break Open Your Geodes

Put the geode in a bag or sock. Make sure to protect the surface you are working on and hit the geode firmly with a hammer, aiming for the center – safety glasses are recommended. Take care not to hit your fingers, and be sure to use an old sock – as it will probably get a hole in it!
