

Street Hockey Rink Kit Instructions

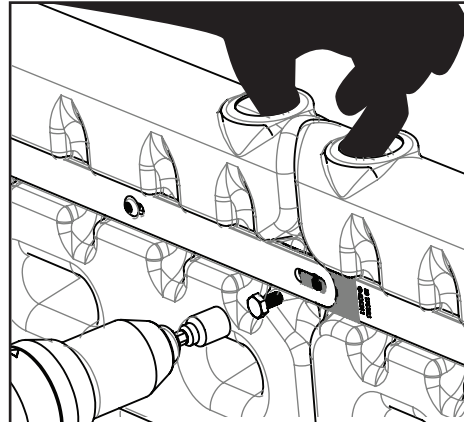

SET UP

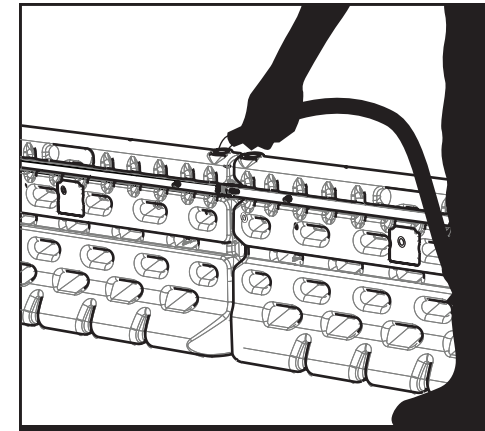

1 Place Panels

To form the straight walls, align Straight Panels. Ensure that each opposing wall contains the same number of Straight Panels. Form each corner by placing four Curved Panels. In windy conditions, complete Step 3 as you place each Panel.

2 Connect Links

Pull the Panels together snugly as shown, and using the Hex Bolt Driver, tighten the Hex Bolt to interlock the mating teeth on each Link.

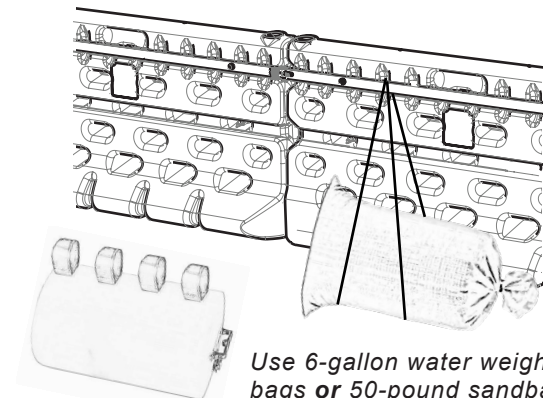

3 Partially Fill Panels

As shown, use a hose to partially fill each Panel. **Fill just the base** (approximately five inches), not the narrow portion of the Panel. Filling should take approximately 20 seconds per Panel. If preferred, sand may be used instead of water to fill the base.

NOTICE REGARDING WIND: *YardRink Street was designed to be used on calm or nearly calm days. On windy days, a wall may tip over. If this occurs, wait for the wind to subside, reposition the wall into an upright position, and refill any emptied Panels per step 3 above.*

To increase resistance to tipping, consider purchasing 50-pound sandbags or 6-gallon water weight bags. Place at least two weighted bags, spaced evenly, for each wall. Position bags on the ground, leaning onto the base of the outside of a Straight Panel, and tie the bag firmly to the Link of a Straight Panel using braided nylon paracord rope (minimum 5/32" thickness).

When strong winds are forecast, disassemble and temporarily store the Panels.

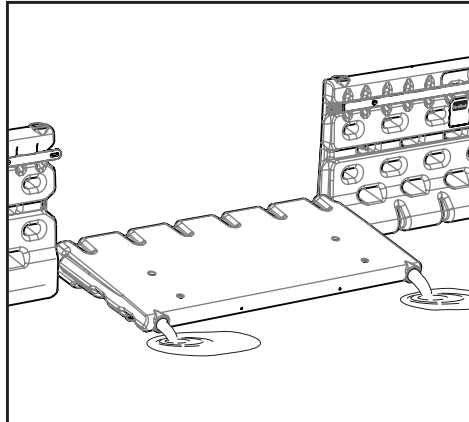

Use 6-gallon water weight bags or 50-pound sandbags.

Street Hockey Rink Kit Instructions

TAKE DOWN

1 Empty Panels

Unscrew all hex bolts. **Save the Hex Bolts for use next season!** Tip over each Panel to empty it.

2 Stack Panels & Store

For off-season storage, stack Panels head-to-toe. (You may wish to use the shipping boxes.)
